"Sequence analysis of the genome of the unicellular cyanobacterium
synechocystis sp. strain PCC6803. I. Sequence features in the 1 Mb

Eregion from map positions 64% to 92% of the genome.",

PONCTION: Caralyzes the phosphorylation of the 3'-hydroxyl group

-!-PONCTION: Caralyzes the phosphorylation of the 3'-hydroxyl group

of dephosphoronzyme A to form coenzyme A (By similarity).

-!-PATHWAY: Coenzyme A (CoA) biosynchhesis, fifth (last) step.

-!-SUBCELULLAR LOCATION: Cytophasmic (By similarity).

-! SIBNIARITY: Belongs to the coaE family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

--- SUBCELLULAR LOCATION: Nuclear.
--- PTM: Phosphorylated in vivo.
--- DISEASE: Defects in Livo.
--- DISEASE: Defects in Livo.
--- Cellular hypersensitivity to DNA-damaging agents.
--- SIMILARITY: Belongs to the ATP-dependent DNA ligase family.
                                "Mutations in the DNA ligase I gene of an individual with immunodeficiencies and cellular hypersensitivity to DNA-damaging
                                                                                                -I - FUNCTION: This protein seals, during DNA replication, DNA recombination and DNA repair, nicks in double-stranded DNA.
-! - CATALYTIC ACTIVITY: ATP + {decxyribonuclectide} (N) + {decxyribonuclectide} (N) +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AMP (BY SIMILARITY).

-!- FUNCTION: Essential for recycling GMP and indirectly, cGMP.
-!- CATALYTIC ACTIVITY, ATP + GMP = ADP + GDP.
-!- SUBJELLUTAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the guanylate kinase family.

-!- FUNCTION: Essential for recycling GMP and indirectly, cGMP.
-!- CATALYTICA ACTIVITY: ATP + GMP = ADP + GDP.
-!- SUBCELLUTAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the guanylate kinase family.
                                                                                                                                                           Neisseria meningitidis (serogroup B).
Bacteria; Proteobacteria; Betaproteobacteria; Neisseriales;
Neisseriaceae; Neisseria.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        89.7%; Score 26; DB 1; Length 205; 80.0%; Pred. "Mammalian homologs of Xenopus nocturnin: conservation of structure
and circadian regulation.";
Submitted (OCT-1999) to the EMBL/GenBank/DDBJ databases.
-!-FUNCTION: Component of the circadian clock or downstream effector
of clock function. Exhibits a high amplitude circadian rhythm with
maximal levels in early evening. In constant darkness or constant
light, the amplitude of the rhythm decreases (By similarity).
-!-SIMILARITY: Belongs to the CCR4/nocturin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

A disease and citrus variegated chlorosis strains of Xylella
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                fastidiosa.",
J. Bacteriol. 185:1018-1026(2003).
-!- FUNCTION: Pormation of pseudouridine at positions 38, 39 and 40 in
-!- FUNCTION: Pormation of pseudouridine at positions 38, 39 and 40 in
-!- CATALYTIC ACTIVITY: Uracil + D-ribose 5-phosphate = pseudouridine
5'-phosphate + H(2)0.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        10-OCT-2003 (Rel. 42, Last sequence update)
10-OCT-2003 (Rel. 42, Last annotation update)
1RNA pseudouridine synthase A (EC 4.2.1.70) (Pseudouridylate synthase
1) (Pseudouridine synthase I) (Uracil hydrolyase)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -!- SIMÎLARÎTY: Belongs to the pseudouridine synthase truA family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Bacteria; Proteobacteria; Gammaproteobacteria; Xanthomonadales; Xanthomonadacese; Xylella.

The small subunit of the mammalian mitochondrial ribosome:
identification of the full complement of ribosomal proteins present.",
J. Biol. Chem. 276:19363-19374 (2001).

-! SUBUNIT: Component of the mitochondrial ribosome small subunit
(28S) which comprises a 12S rRNA and about 30 distinct proteins.
-! SUBCELIULAR LOCATION: Mitochondrial.

Submitted (JUN-2003) to the EMBL/Genbank/DDBA databases.

-!- FUNCTION: Receptor for cholecystokinin. Has a 1000 fold affinity
for CCK rather than for gastrin. It modulates feeding and dopamine-induced behavior in the central and peripheral nervous system. This receptor mediates its action by association with G proteins that activate a phosphatidylinositol-calcium second
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 messenger system.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

Jaiol. Chem. 272:5995-6003(1997).

J. Biol. Chem. 272:5995-6003(1997).

-!- FUNCTION: Component of the circadian clock or downstream effector of clock function. Exhibits a high amplitude circadian rhythm with maximal levels in early evening. In constant darkness or constant light, the amplitude of the rhythm decreases (By similarity).

-!- SIMILARITY: Belongs to the CCR4/nocturin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Puech A., Dupressoir A., Loireau M.P., Mattei M.-G., Heidmann T., "Characterization of two age-induced intracisternal *particle-related transcripts in the mouse liver.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     "Mang Y., Osterbur D.L., Green C.B., Besharse J.C.;
"Mammalian homologs of Xenopus nocturnin: conservation of structure and circadian regulation.";
Submitted (OCT-1999) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Component of the circadian clock or downstream effector of clock function. Exhibits a high amplitude circadian rhythm with maximal levels in early evening. In constant darkness or constant light, the amplitude of the rhythm decreases (By similarity).
-!- SIMILARITY: Belongs to the CCR4/nocturin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Dupressoir A., Barbot W., Loireau M.P., Heidmann T.; CR4 CR4 Characterization of a mammalian gene related to the yeast CCR4 general transcription factor and revealed by transposon insertion."; J. -!- FUNCTION: RNA-DEFENDENT ATPASE ACTIVITY. PROBABLY INTERACTS
-!- STA RIBGOOMAL RNA (BY SIMILARITY).
-!- SIMILARITY: Belongs to the DRAD box helicase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

--- CATALYTIC ACTIVITY: Release of an N-terminal amino acid, Xaa-|-
Xbb-, in which Xaa is preferably Leu, but may be other amino acids
including Pro although not Arg or Lys, and Xbb may be Pro.
--- CORACTON: Binds 2 manganese ions per subunit (By similarity).
--- CORACTON: Cytoplasmic (By similarity).
--- SIMILARITY: Belongs to peptidase family MI7.
           Kawarabayasi Y., Hino Y., Horikawa H., Yamazaki S., Haikawa Y., Jin-no K., Takahashi M., Sekine M., Baba S.-I., Ankai A., Kosugi H., Hosoyama A., Fukui S., Nagai Y., Nishijima K., Nakazawa H., Takamiya M., Masuda S., Funahashi T., Tanaka T., Kudoh Y., Yamazaki J., Kushida N., Oguchi A., Aoki K.-I., Kudoh Y., Nakamura N., Nomura N., Sako Y., Kikuchi H.; Nubota K., Nomura N., Sako Y., Kikuchi H.; Nubota K., DNA Res. 6:83-101(1999).

-I- FUNCTION: Presumably involved in the processing and regular turnover of intracellular proteins. Catalyzes the removal of unsubstituted N-terminal amino acids from various peptides (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  idase; Manganese; Complete protecome.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A;Status: preliminary; translated from GB/EMBL/DDBJ

() Date: 15-Oct-1999 #sequence_revision 15-Oct-1999 #text_change 15-Oct-1999
() Accession: T29369
() Accession: T29369
A.Description: The sequence of C. elegans cosmid ZC404.
A.Recence number: Z20614
A.Accession: T29369
A.Status: preliminary: translated from GB/EMBL/DDBJ
A.Moclecule type: DNA
A.Residues: 1-351 <-BEN>
A.Residues: 1-351 <-BEN>
A.Residues: 1-351 <-BEN>
A.Residues: Strain Bristol N2; clone ZC404

N;Alternate names: protein J0693; protein YJL129c
Species: Saccharomyces cerevisiae
C;Date: 31-Mar-1991 #sequence_revisiae
C;Accession: S05849; S56910
